

SIZE CHART:

FOR 94" TO 102" SPAS
(239 CM TO 259 CM)

FOR 81" TO 93" SPAS
(206 CM TO 236 CM)

FOR 68" TO 80" SPAS
(173 CM TO 203 CM)

In extensive testing at the National Pool Industry Research Center at California Polytechnic University, San Luis Obispo, this technology proved a daily heat benefit to test spas of 1,070 BTUs per square foot. (39,760 Heat Joules per square meter). Visit our website for full details: www.solarsunrings.com

SOLAR SPA COVER™

The Solar Spa Cover™ is a passive spa heating device made from two sheets of heavyweight UV resistant vinyl. The upper clear layer focuses sunlight on the translucent blue colored lower layer, The blue layer absorbs about 50% of the sunlight and converts it to heat, The rest of the sunlight is allowed to pass through for deep water heating.

The Solar Spa Cover™ uses the same proven technology as Solar Sun Rings™ adapted to the special needs of spas. These spas have much higher water temperatures combined with greater water velocity and turbulence. Spas without covers lose much of their costly heat overnight and regain very little during the day.

At night, the contained air acts as an insulating blanket to retain heat gained during daylight. The contained air will also retain a great amount of heat supplied by your heater. Your spa will lose less temperature overnight and will heat up quicker, saving you money while making your spa system much more heat efficient than before. Solar Spa Covers™ may be used on all chlorine or salt water spa systems whether in ground or above ground.

UNIQUE PATENTED DESIGN

Most other spa covers become swamped by the jets within the spa and do not allow for these covers to function as they are supposed to, but our unique patented design solves these endemic spa problems. We have combined maximum solar heating with our greatest practical encapsulated air thermal barrier while building the necessary rigidity in the spa cover to withstand the turbulence caused by high flow water jets.

ADJUSTABLE TO YOUR SPA

Any spa can take advantage of the benefits that Solar Spa Cover™ can offer! Each spa cover is partitioned with three outer rings, simply trim down to the ring that corresponds to the size of your spa and inflate the outer most ring for buoyancy and rigidity.

REDUCES WATER LOSS

The high temperatures of spas promote rapid evaporation of water that in turn also cause rapid cooling of your spa. The patented design of the Solar Spa Cover™ reduces evaporation, thus saving your water and heat.

REDUCES CHEMICALS

The two layers of heavyweight vinyl also prevent much of the evaporation of your spa chemicals. When used consistently you will save on costly spa chemicals.

KEEP YOUR POOL HEALTHY

Your spa requires some direct sunlight and uncovered time to stay healthy. The light weight and ease of removal and installation of the Solar Spa Cover make uncovering your spa easy and convenient.

EASILY CLEANED

After removal from the swimming pool, Solar Sun Rings™ can be easily cleaned with a sponge and mild detergent solution.
